

Changing How We Save Lives Together

SavingLife Inc was formed as a benefit company, meaning our mission of saving pets lives is just as important as raising the money needed for our organization to survive. To that end, we have spent the past 5 years speaking with animal welfare professionals and have heard about the areas of greatest need. As the list of top priorities change, we will change with it so our focus is always on what is most valuable to our community.

Here is what we have heard and what we are (will be) doing to help address the need:

- **Low staffing, high turnover, incredibly high stress** - one way to offset attrition and stress is to make people's work more satisfying and efficient. The SAINT platform increases moral because it is the only platform that enables your team to save more lives. It also can maximize your teams efficiency, thus reducing stress.
- **Funding is even harder to come by**- SavingLife has solutions which will increase revenue and decrease your expenses, thus improving your bottom line with no extra work by you or your team.
- **Funding help for more expensive items such as medical equipment**- this was brought to our attention last month and is a new initiative we are working on. Keep watching our newsletters and website for updates.

**INTERESTED IN LEARNING ABOUT THESE SOLUTIONS AND MORE?

Microchips

We have had 2 associations contact us to take advantage of our volume pricing on microchips since we announced it last month. We would love to add your group to the program. As a reminder - we aggregate all orders for an association so ALL members get the lowest price. We do all the work. There is no burden on association boards of directors.

Search Our National Microchip Database From Your Computer

We are very excited to announce users of SAINT can now search the microchip registration database without having to contact any outside group. Registration for pet parents and shelters is FREE and all updates to accounts are FREE. When you need to search for a microchip, you simply enter the number into our global search and if that chip is registered in SAINT, the owner information will be returned. This is just one way we save your staff time, increase efficiency and return more pets to their owners.
