

PLANT BASED SUPPORT FOR SEPARATION ANXIETY, NOISE PHOBIAS, AND MORE!

**BRAVE
PAWS™**

Daily Anxiety & Stress Support

Veterinarian recommended

Brave Paws Daily Anxiety & Stress Support Chewables for Dogs is the only product on the market with Souroubea, a rainforest vine native to Costa Rica, and Platanus, better known as the North American Sycamore Tree. These two botanical ingredients contain betulinic acid and natural compounds called triterpenes that have been clinically studied for their anti-anxiety properties.

How is Brave Paws different?

- ✔ Unique – the only product on the market with Souroubea, a South-American rainforest vine that has been used in traditional medicine for centuries
- ✔ Fast acting – works in one hour
- ✔ Non-drowsy – not a sedative or a drug
- ✔ Convenient – no prescription needed
- ✔ Contains no CBD, THC, Hemp, or Cannabis – why risk it?
- ✔ Melatonin and tryptophan free – because no one wants a sleepy dog
- ✔ Free of tea or tea extracts – because paws can't hold teacups

Brave Paws is designed to help! Just one dose of Brave Paws contains 1000 mg of Souroubea and 1000 mg of Platanus – sources of betulinic acid and other helpful triterpenes.

Our chewables may help your dog:

- ✔ remain calm when separated from you
- ✔ stay relaxed during stressful events, such as storms
- ✔ bark and howl less often when stressed
- ✔ reduce chewing or destructive behavior
- ✔ live a happier life

Easy to Use!

For optimum results, give the appropriate dose by mouth morning and night, with or without food. Give your dog one chewable for every 20 lbs. of body weight. The scored chewables can be easily halved to accommodate both smaller and larger dogs. Brave Paws can also be administered approximately 60 minutes prior to a stressful event for additional support.

May be used daily, up to three times per day. Most dogs love our plant-based chewable, but some may find them tastier with a dab of peanut butter (just make sure it's xylitol-free) or their favorite dog food.

We're passionate about helping pets, the planet, and people. That's why we source ingredients from Coopecuna, a woman-led co-op in rural Costa Rica that uses regenerative farming to improve soil composition, ecological biodiversity, and the local community.
